

Military Cyber Threat OSINT

Intelligence Summary Report

Generated July 06, 2026 | Data source: `military_osint_master.csv`

Executive Summary

Total unique threat entries	2,413
Distinct data sources	37
Threat categories (T1-T8)	8
Countries / regions with dedicated coverage	13+ (US, UK, Germany, Canada, Australia, India, Pakistan, China, Israel)
CRITICAL-severity findings	535
HIGH-confidence findings	1,911 (79% of total)

The dataset aggregates threat intelligence collected from ~40 free and paid OSINT sources - certificate transparency logs, exposed cloud storage buckets, dark web search, ransomware leak-site monitoring, satellite tracking, CVE/vulnerability feeds, Telegram OSINT channels, and defence news - filtered through a shared relevance engine so that only military-, government-, and defence-contractor-relevant findings are retained.

Breakdown by Threat Category

Code	Category	Count	% of Total
T1	Personnel & Identity Threats	32	1.3%
T2	Data & Document Leakage	86	3.6%
T3	Communication & Network Attacks	625	25.9%
T4	Navigation, Positioning & Electronic Warfare	149	6.2%
T5	Critical Infrastructure Attacks	221	9.2%
T6	Malware & Advanced Cyber Attacks	1,203	49.9%
T7	Emerging & Autonomous System Threats	64	2.7%
T8	Information Operations & Influence Threats	33	1.4%

Severity, Confidence & Source-Layer Distribution

Severity	Count	%	Confidence	Count	%	Layer	Count	%
CRITICAL	535	22.2%	HIGH	1,911	79.2%	Surface Web	970	40.2%
HIGH	1,288	53.4%	MEDIUM	473	19.6%	Deep Web	1,439	59.6%
MEDIUM	328	13.6%	LOW	29	1.2%	Dark Web	4	0.2%
LOW	262	10.9%						

Top Data Sources

Source	Findings
ThreatFox (abuse.ch)	642
MalwareBazaar (abuse.ch)	505
crt.sh (Certificate Transparency)	287
URLScan.io	251
CISA KEV	221
Celestrak SATCAT (US Space Command)	142
NVD (NIST)	104
LeakIX	43
GrayhatWarfare	43
CIRCL CVE API	41
OTX AlienVault	35
GitHub (public repo)	32
VirusTotal	12
Livelist Defence	8
Asia-Pacific Defence Reporter (Australia/APAC)	8

Free vs. Paid Tools

All 2,413 findings in this dataset were produced entirely by **free-tier sources** (37 of them, active and contributing data). The tool also has paid/premium integrations built in, but none are currently active on this account -- either not configured, or blocked by free-tier account limits (noted below).

Free sources actively contributing data:

Category	Sources
Certificate transparency	crt.sh
Internet-wide scanners	URLScan.io, LeakIX, GrayHatWarfare
Malware / threat-intel feeds	ThreatFox, MalwareBazaar, OTX AlienVault, URLhaus, Feodo Tracker, VirusTotal (free tier)
Vulnerability feeds	CISA KEV, NVD, CIRCL CVE API
Satellite / navigation tracking	Celestrak SATCAT, OpenSky Network
Code repositories	GitHub code search
Dark web	Torch (.onion search via Tor)
Ransomware leak-site tracking	ransomware.live
Defence news / RSS	Defense News, BBC World/Defence, The War Zone, Breaking Defense, C4ISRNET, Army/Navy/Air Force Times, CyberScoop, BleepingComputer, The Hacker News, Livefist Defence, Asia-Pacific Defence Reporter, Zone Militaire/Opex360
Social media monitoring	Telegram (public channels)

Paid / premium tools built into the tool (not currently active):

Tool	Tier / Cost	Status
Shodan	\$69/mo	Configured, but account has 0 query credits
Censys	Free tier available (250/mo)	Configured, but returning authorization errors
SecurityTrails	\$50/mo	Not configured
IntelligenceX	~\$100/mo	Not configured
DeHashed	\$15/mo	Not configured
BinaryEdge	\$50/mo	Not configured
Recorded Future	~\$25,000+/yr (enterprise)	Not configured
SpyCloud	\$500+/mo	Not configured
Cybersixgill, KELA, DarkOwl, Flashpoint, Digital Shadows	Enterprise pricing	Not configured

The tool is written so that adding any of these later only requires pasting in an API key -- no code changes needed.

Geographic Coverage

Of 2,413 total findings, 782 carry a specific country/alliance attribution (the remainder are labeled Global, Unknown, Cloud, Dark Web, or an orbital owner code for satellite tracking data - categories that are not tied to one country by nature of the source).

Country / Region	Findings
United States	359
US	6
India	70
China	29
Pakistan	18
United Kingdom	16
Germany	35
Canada	30
Australia	8
Israel	32
France	35
Japan	41
South Korea	27
Taiwan	33
Ukraine	28
NATO	15

Notable Findings

UK Ministry of Defence - exposed Git repository

vle.action.mod.uk (a UK MoD e-learning platform) has a publicly accessible .git directory, revealing it runs Moodle. Cross-referenced against Shodan InternetDB, the exposed version matches 5 known CVEs. Severity: CRITICAL.

US Army - exposed .DS_Store directory listing

fifeanddrum.army.mil exposes a macOS .DS_Store file revealing 18 internal folders. Observed repeatedly (91 separate scan events), indicating a persistent, unresolved exposure rather than a one-off.

US Army - exposed internal API documentation

A public Swagger UI on an army.mil host lists live API endpoints, including delete-capable routes - a real exposed attack surface.

Dark web coverage

Direct Tor (.onion) search returned genuine relevant results this cycle, including a forum thread referencing a Pentagon security leak.

Methodology

Data is collected by an automated OSINT tool querying certificate transparency logs (crt.sh), internet-wide scanners (URLScan, LeakIX, ZoomEye, Onyphe, GrayHatWarfare), malware/threat-intel feeds (ThreatFox, MalwareBazaar, OTX AlienVault, CISA KEV, NVD, CIRCL), satellite tracking (Celestrak), dark web search (Torch via Tor), ransomware leak-site monitoring, Telegram OSINT channels, and defence news RSS. Every result passes through a shared relevance-filtering engine (domain allow-lists, contractor/APT name matching, and negative-term rejection) before being retained, and results are deduplicated against all prior collection runs.

This report reflects data collected via free/public and licensed OSINT sources only. No unauthorized access or exploitation was performed.
